

Conversion lenses for DIGITAL CAMERAS & CAMCORDERS

COKIN has introduced to the market a new series of Digital converters in 4 diameters (25-37-52-58 mm filter thread) which will boost the possibilities of your personal Digital Imaging Equipment.

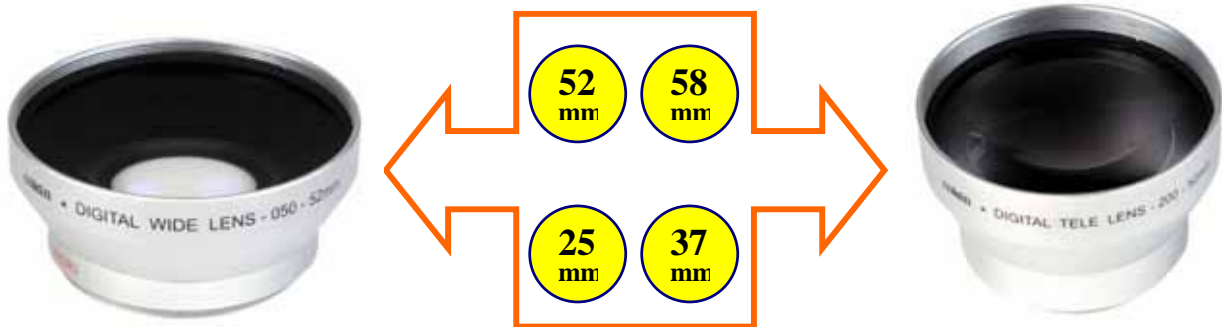

The range of COKIN Digi-Lenses allows to shoot **Wide-Angle** or **Telephoto images** in a wide variety of applications using most of today's digital cameras and camcorders. Mounting the COKIN Digi-lenses on the camera effectively changes the perspective at the same distance of the subject :

COKIN WIDE-ANGLE x 0.5

OPEN UP perspective

COKIN TELEPHOTO x 2

COMPRESS perspective

COKIN Digi-lenses are made of high-quality mineral glass materials and are designed for perfect compatibility with the latest digital cameras and camcorders. They are optically optimised to be used with digital technology in order to ensure sharpness and excellent results.

Wish to see wider or closer images ?

Even the most recent Digital cameras are likely to have a very limited angle of vision or lack of optical zooming power. Without a conversion lens, you take a great picture but the building is too wide or the scene too far ? **From the same position, you can fit more into the image or bring interesting subjects that much closer !**

■ Screw a COKIN Wide-Angle lens onto your Digital equipment and frame all your FRIENDS or the whole FAMILY at the party ! You want to shoot an idyllic LANDSCAPE or a nice MONUMENT into the streets of the most beautiful cities of the world ? Once again, increase your angle of vision for a complete view of the scene. **COKIN Wide-Angle x 0.5** are a great solution when you want to include a lot of information or foreground details in the frame but can't stand very far away from them.

■ The **COKIN Super Wide-Angle x 0.43** is ideal to produce spectacular shots with a main subject to emphasize and show it in a super wide way. It can also be used to produce creative effects such as curved horizons and exaggerated depth.

■ Are your kids playing football at the far end of your garden ? Multiply by 2 the power of your camera with a Telephoto lens and keep for ever this magic moment, without disturbing them ! Double the optical performances of your zoom and capture from far away your pets without risk to make them scared. The **COKIN Tele x 2** can isolate small details in a scene and compress perspective so that the background appears closer to the foreground subject. They are ideal for portraits too : the limited depth of field allows to the subject to stand out crisply against a blurred background.

COKIN Tele and Wide-Angle lenses are the key items which will raise your images to a professional-like level, seeing the world from new perspectives.

Ideal for group or landscape shots

2x more vision

COKIN WIDE-ANGLE

R730

Ideal to produce creative shots

Fish-eye effect

COKIN SUPER WIDE-ANGLE

R720

Ideal for portrait or wildlife shots

2x closer
